PTERODACTYL v4 carrier — DRAFT generated from tools/generate_v4_schematic.py. Connections by label; see docs/POWER_ARCHITECTURE.md.

Battery -> J1 -> F1 -> Q1 (reverse protection) -> J2 panel switch -> VBAT_SW -> U2 5 V buck-boost -> +5V -> Teensy VIN.

U2 three-pin and U5 GPS carrier footprints assigned. GPS geometry visually accepted 2026-10-20; installed fit, holder clearance and retention pending.

Teensy: cut the VUSB/VIN pads before applying external power (PJRC). +3V3 is the Teensy 3.3 V output (250 mA external max).

I2C at 100 kHz for bring-up (see PLACEMENT_AND_INTERFERENCE.md). No GPIO may exceed 3.3 V.
